What I Know About the Origins of Covid-19

Updated: 3 days ago

The medical industrial complex in the United States has increasingly been weaponized as an apparatus of institutional gaslighting and control of workers experiencing socioeconomic anxiety and alienation. Citizens have become seen as a disease to cure rather than as a value to cultivate and invest in.

I've heard all sorts of spin on the topic of covid-19 over the years, and I wanted to spill the tea on what I know, having worked in the intelligence space. We all remember the way things were: social media control, the media all in lockstep. So what really happened?

I can give you my own theory and what I know.

Back in 2016-2017 I was in a bad spot. I was living off-grid in a small trailer that I built, and the biomedical startup I was working for (Automed Pty Ltd) ran out of funding. The CEO simply stopped paying his employees, and I was stranded in Ames, Iowa, living in the off-grid trailer that I built in temperatures that were literally colder than the arctic - with windchill. I heard from all the brilliant baby boomers how I was screwed because I just was simply not working hard enough, had an ude problem, wasn't qualified, and on the left I heard that I was just entitled and had an unearned privilege and all of that garbage (do you really feel like the whole world is against you?).

I did spend some time reflecting on myself - that perhaps I had failed in some way in the quest towards obtaining middle class stability because I was just not hard working enough - didn't study enough - was too entitled, needed to deconstruct myself, needed to study more, learn more. However, what is going on in the United States and in many developed countries is much more nefarious - and a failure to address the underlying systemic issues created a power vacuum that led to the rise of the alt-right and grifters like self-help psychologist Dr. Jordan Peterson (who I've had long conversations with) and self-help hustler Andrew Tate. The aging population along with rising wealth and income inequality necessitated importing labor to address labor shortages, but at the same time this can lead to sociocultural alienation and does not fully address problems with rising cost of living and stagnation of wages - that would require the workers to organize and confront powerful interests.

At the same time, I was applying for all sorts of jobs - and was eventually discovered by Booz Allen Hamilton - the NSA subcontractor infamously remembered as the employer of whistleblower Edward Snowden. I passed their interviews as I was quite proficient at hacking and reverse engineering since my hobby for many years was hacking Super Nintendo games from my childhood like Super Mario World and Gameboy Advanced or Nintendo DS games like Pokémon. The only issue was, to obtain my TS/SCI w/FSP security clearance, after submitting my 100-page long SF-86 form, there was a long process and federal investigation required - which took two years to complete.

In the meantime, after enduring a brutal winter in the harshest possible conditions, I secured a job at General Dynamics Mission Systems in Arizona - and then after traveling there, my job offer was rescinded when the folks at Automed failed to send my proof of employment to the company, leaving me stranded in the Arizona desert during the summer where I took miles long treks back and forth from my car every day to secure basic necessities like food. After producing my W2 forms the company apologized that they no longer had the position I had accepted and they gave me several thousands of dollars in hush money.

I went to the science center in Phoenix one afternoon to escape the summer heat and while there, I encountered a presentation by a nice young lady on the topic of experimental flying vehicles - and after her presentation, I told her that I was currently unemployed. Her name was Aurora - like the Greek goddess of the dawn - and she worked at a research and development subsidiary of Boeing in the DC metro area called Aurora Flight Sciences. It was almost like fate. She told me to apply, and I got the job, and made my way to NOVA/DC.

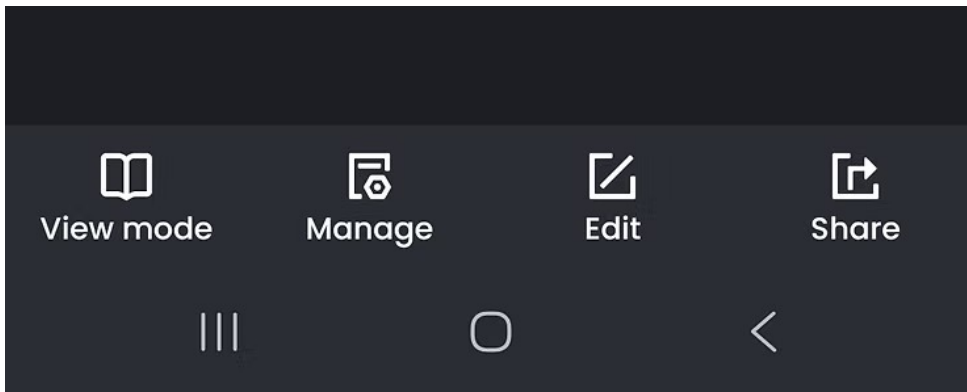

After working at the company for several months I was wrongfully terminated after reporting safety issues (namely their PS-B9 power strip were known to catch fire which I reported in the Safe-To-Mate procedure for the Hardware-In-Loop and Software-In-Loop testing simulations required for FAA approval). I mentioned to the staff that they needed to install proper protections against excessive power draw and apparently they didn't listen and shortly before I was fired the entire building power went out as a result of drawing too many amps. I then spend the remainder of the year right before the covid-19 pandemic traveling around the area, where I visited Fort Detrick - the US military bioweapons research lab, which I found was closed... due to a lab leak... right before... the pandemic.

Well isn't that a strange coincidence?

A pictograph I drew while on my 5150 where I was accused of being delusional before my trial in front of the Ventura County Superior Court. In the spirit of widespread censorship and institutionalized gaslighting I was accused of being out of touch with reality and needed to be forcibly drugged with Lurasidone - a popular antipsychotic neuroleptic. I was refused my patient right to a phone call and was threatened. When I complained, my dose was doubled by the doctor.

The Ventura County Superior Court ruled I was not delusional or a threat and then I was discharged illegally to live out of my car during a period of unemployment.

My story certainly sounds crazy, but we all sort of feel that something is off about the official story. So what do I know and what are my theories?

Well my theory is that there was joint gain of function research between the United States at Fort Detrick and China at the Wuhan Institute under the watch of Dr. Peter Daszak and Dr. Fauci under the Eco- Health alliance with ties to the Bill and Melinda Gates Foundation. Research into climate change and epidemiology shares the same mathematical frameworks and underlying goals - a metanarrative for central planning, resource allocation, and control of the public - and the vaccine was supposed to be the way the central planners would roll out massive adoption for a system for digital IDs.

I've written previous articles about the models used by socioeconomic central planners in the United States - as the economy has become more complex and less reliant on industry, there is a higher need to regulate sociocultural norms to avert institutional collapse.

Now even the intelligence community admits the likelihood of the origins of covid are due to a lab leak. Why do you think they were so worried about controlling the narrative for so long? Now that all this information is public domain it should be pretty obvious.

USING AIRPLANES
GAMING?

Well, I'm not here to tell you what to think, but that's my opinion.

The purpose of this study was to investigate the effects of the intervention on the participants' knowledge, attitudes, and behaviors. The study was conducted in a community setting and involved a pre-test and post-test design. The participants were recruited through a snowball sampling method. The data was collected through a series of interviews and focus group discussions. The results of the study showed that the intervention had a significant positive impact on the participants' knowledge, attitudes, and behaviors. The findings suggest that the intervention was effective in addressing the research objectives.

Keywords: intervention, knowledge, attitudes, behaviors, community setting, pre-test, post-test, snowball sampling, interviews, focus group discussions.

My Story

—

Get to Know Me

I have been on many strange adventures travel off-grid around the world which has contributed to my understanding of the universe and my dedication towards science advocacy, housing affordability, academic integrity, and education funding. From witnessing Occupy Cal amid 500 million dollar budget cuts to the UC system, to corporate and government corruption and academic gatekeeping, I decided to achieve background independence and live in a trailer "tiny home" I built so that I would be able to pursue my endeavors.
